

BAM Leidingen & Industrie BV

Within the BAM Infratechniek, a group of Royal BAM Group NV, the subsidiary BAM Leidingen & Industrie bv acts as a focal point for all industrial piping and mechanical projects as well for large multidisciplinary (EPC-) industrial projects.

Company profile

BAM Leidingen & Industrie bv constructs small-scale to extremely large-scale projects, both above and underground. Mechanical installations for petrochemical, chemical and process plants and the execution of multi-disciplinary projects are amongst the daily activities. Also the constructions of pipelines for water, natural gas, oil and other liquids and gasses, as well as the combined construction of cables and pipelines for the different public utility services belong to our activities.

However, BAM Leidingen & Industrie bv is more than just a company that carries out the work. We are pleased to make our knowledge available to clients and think about solutions together with them. This is one of the conditions for achieving the quality our clients can rely on.

Obviously this also applies for the strict safety and environmental policy which is implemented in every project, no matter how small or how large. The fact that we are also involved in more challenging projects is not very surprising because BAM Leidingen & Industrie bv is one of a small group of specialists in the Netherlands who is able to carry out very complicated projects, and is not afraid to do so. Obviously this is always done in close co-operation with the client. It is only in this way that we can be successful.

Projects
