

BAM Civiel BV

BAM Civiel bv aspires to be a leading, innovative and decisive partner for sustainable solutions in civil and industrial construction. BAM Civiel specialises in designing, developing, executing, managing and maintaining all types of civil engineering projects ranging from infrastructure and hydraulic engineering to wastewater treatment plants and industrial construction.

Company profile

BAM Civiel aims to create sustainable solutions in the field of infrastructure and hydraulic engineering, underground construction and parking, as well as industrial and energy construction. In addition, we can fulfil varying roles: development, design, implementation, operations and/or maintenance. We focus on large-scale, complex and multidisciplinary as well as elementary and small-scale construction projects. We also feel that it is important to be a leading, innovative, adroit and reliable partner.

BAM Civiel has national, regional and specialist departments and business units. As a subsidiary of the Royal BAM Group, we can also make use of the extensive network of knowledge and experience within BAM. Uniting this international, national and regional knowledge and experience enables us to offer the best possible construction solutions on the basis of specific needs and requirements. The end product must be high-quality and economical, throughout the entire lifespan of the structure.
